

Technical Video Services Information & Guidelines for HOC

- 1) Basic description / signal requirements
- 2) Hardware – Setup/power requirements
- 3) Process Video production
(e.g. for World Cup Series)
- 4) Staff
- 5) ICF role

Technical Video Services (TVS)

Fundamental Function:

TVS delivers the central video signal for all Level 1 and 2 ICF competitions.

TVS has a number of clients and must be capable of serving the following users:

- 1) NF Teams (Coaches/Sport Scientists/Team Leaders)
- 2) ICF Technical Officials (Chief Judge/ Video Judges)
- 3) HOC Services; Video wall, public screens if Live TV not available
- 4) Video on Demand (VOD) streamed on the internet where appropriate

Power Consumption Requirements

This outlines the maximum power requirement of each TVS module.

Basic Modules

- TVS signal distribution
- Camera operations
- Video Judge area
- Distribution to Nations needs

Optional Modules

- OB van
- Video production
- Video capture
- Video on Demand (VOD)

The requirements of the basic modules are not able to be changed.
The optional modules may vary to meet the needs of the event.

Basic Modules

TVS Signal Distribution Module

Contents: up to 20 Distributors (serving 28 nations), control Monitors (2), TV-Screen for Live results, Laptop, DVD/ HD recorder, WLAN Antenna, LAN network,

Power requirement: 1200 W

Camera Operations Module

Contents: up to 4- 6 cameras on course with power feed.

Power requirement: 500 W

Distribution to Nations needs

Contents: up to 28 workstations for nations, each with power for laptops, monitors, printers, external hard drives with their own power supply , UPS

Power requirement: 25,000 W

Optional Modules

OB Van Module

Contents: Complete Braodcasting (incl. switching), external from video-coaches area

Power requirement: please request broadcaster / contractor

Video Production indoor

Contents: Complete switching, internal from video-coaches area

Power requirement: 3500 W

Optional Modules continued...

Video Capture Module

Contents: up to 3 Workstations for video-capturing, streaming Internet-TV

Power requirement: 2500 W

Video Judge Module

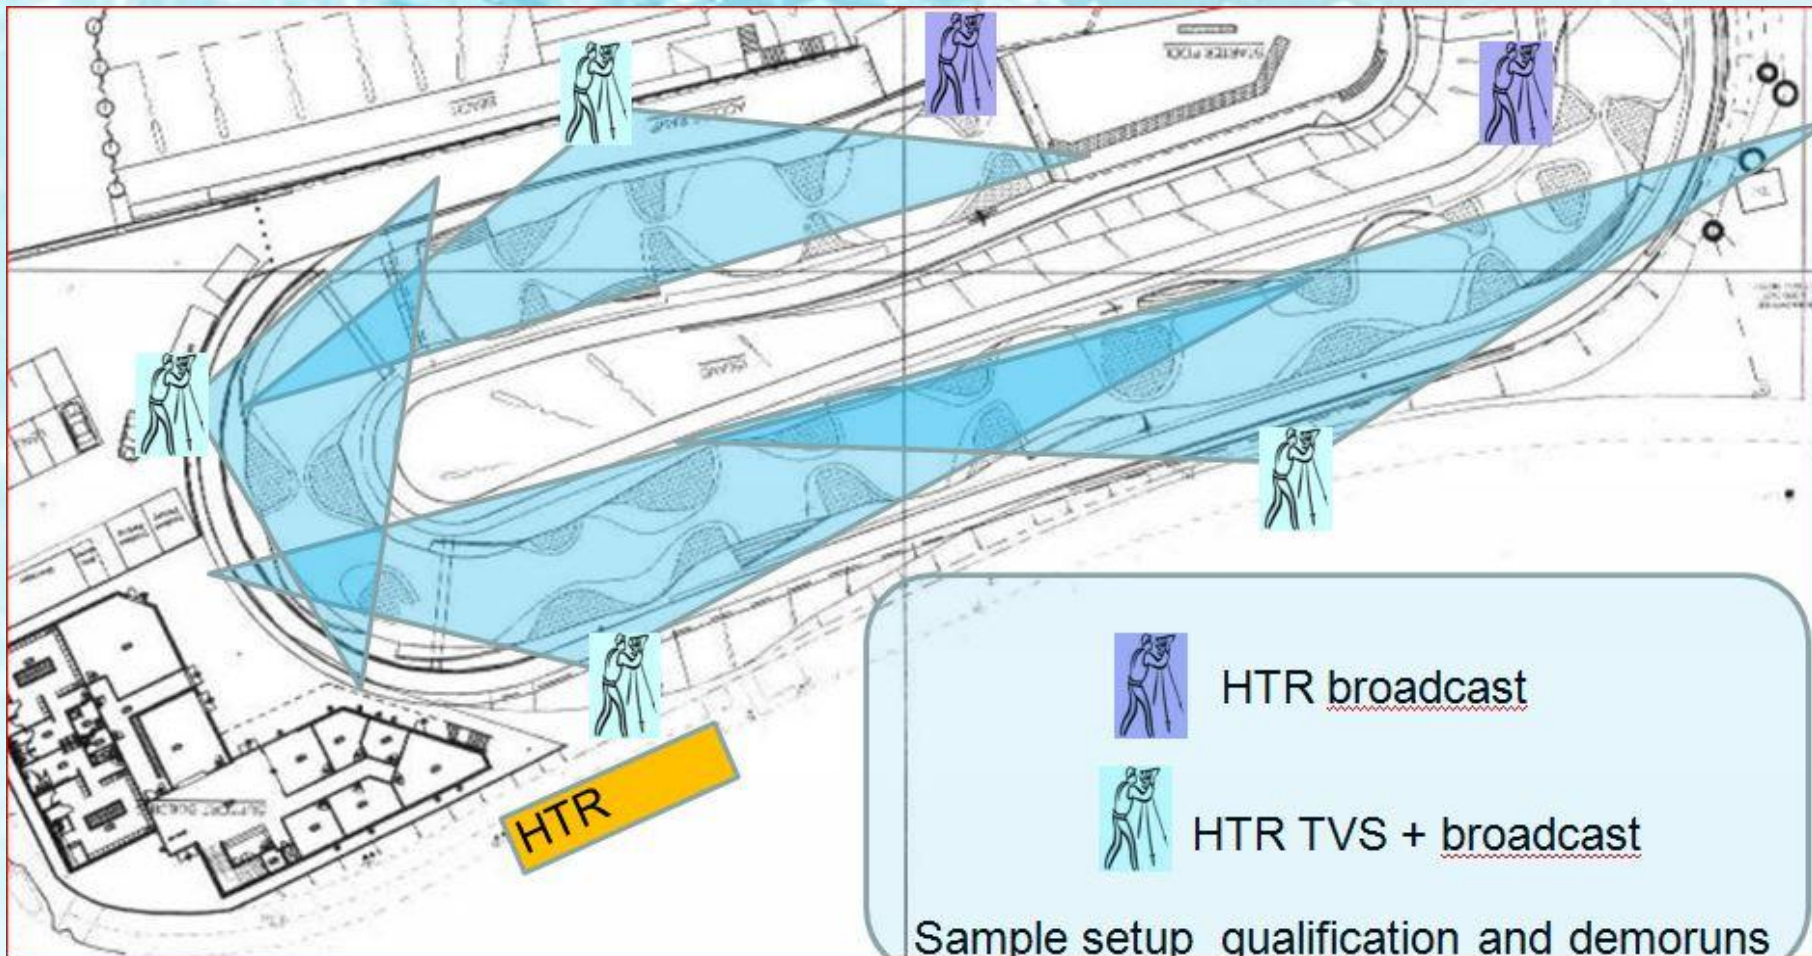

Contents: 4-5 workstations for video judging (TV-monitors, PC-monitors, laptops, LAN - hardware, external hard drives , HD distribution amplifier,

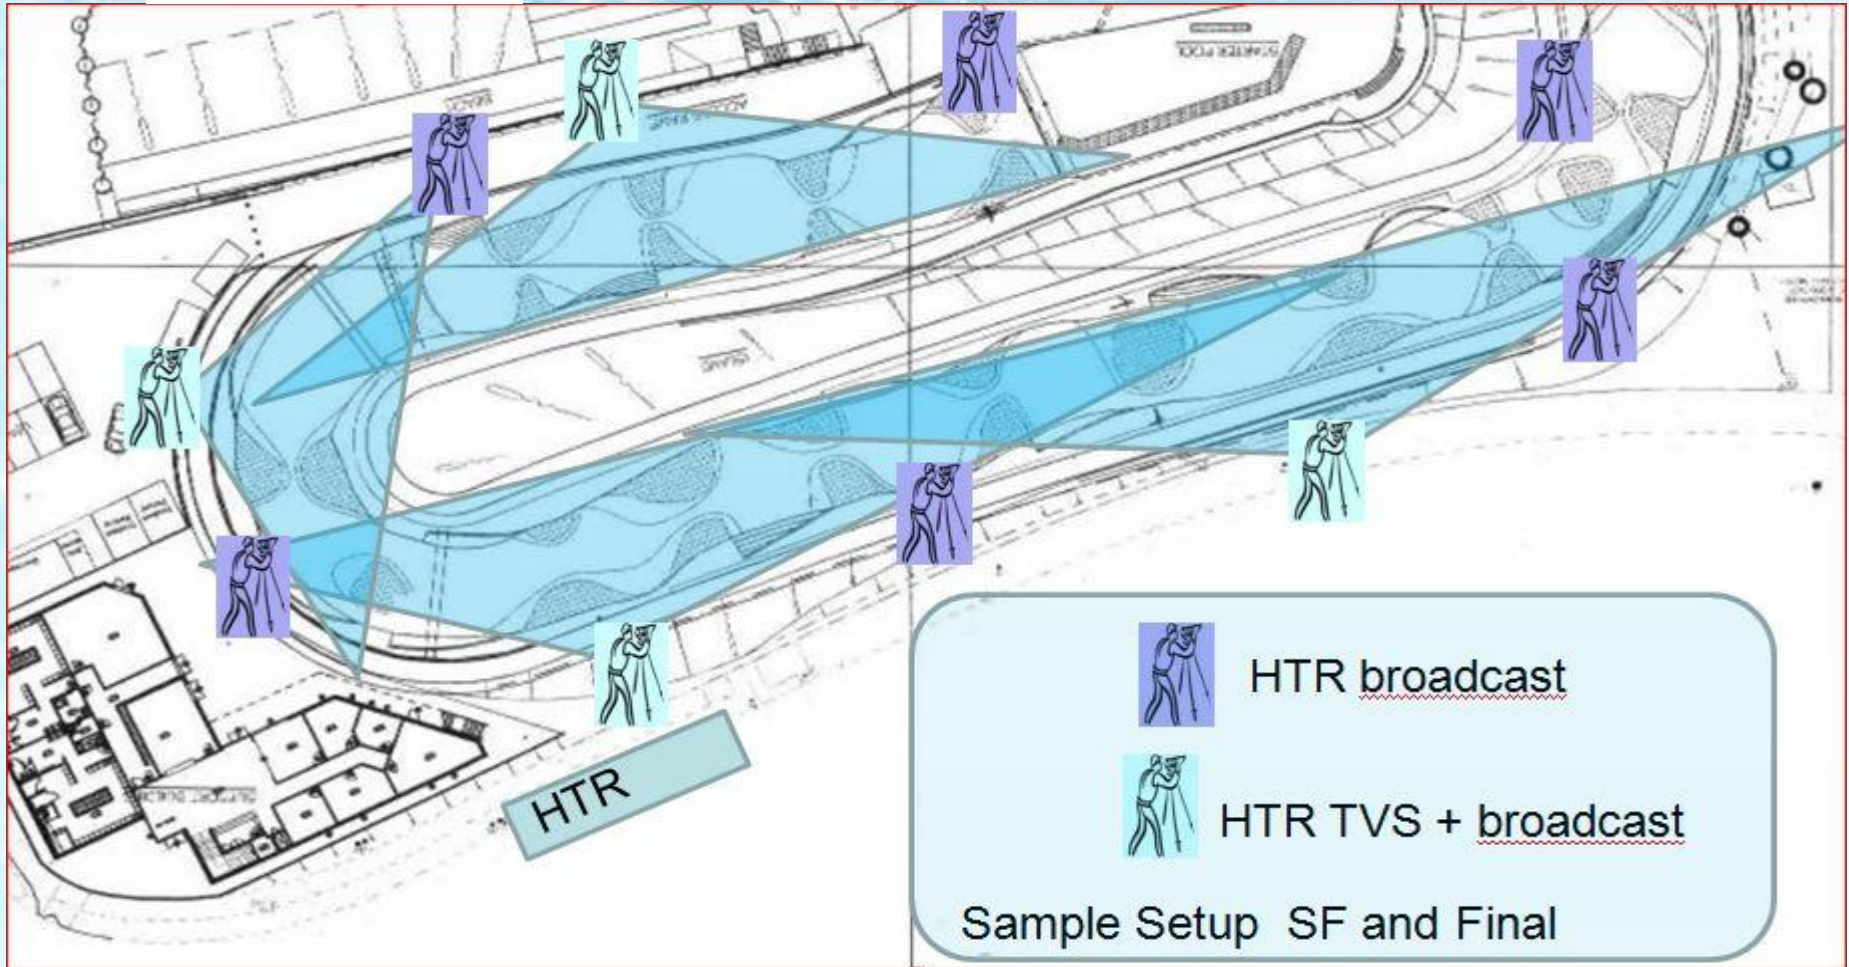

Power requirement: 1500 W (two phase !)

Videowall Setup

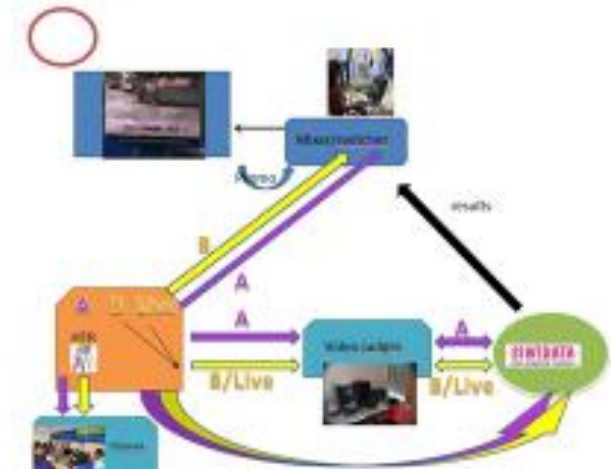

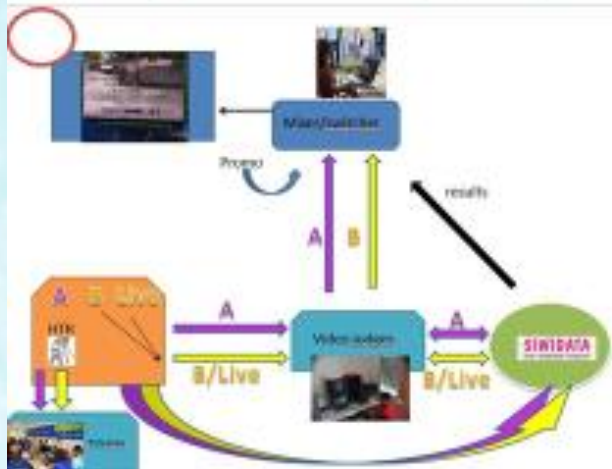

Video wall setup ready at _____ !

pick of the signals from Siwi or TV(graphics ?) (in BNC/HD-SDI in 1080 I/50) by the video wall contractor !

contact person: _____

Cabling, staffing, operater, hardware,a lot of questions to resolve!
This area needs discussion between the ICF TVS co-ordinator and the Videowall operator

- The video wall contractor must provide the cable to pickup the 3 feeds (A feed, B feed, yellow and black results feed) from the Broadcast truck or the OVR.
- All 3 feeds are provided in HD-SDI, RG59 or RG60, 1080 50i and not in HDMI !

ICF role in 2016:

- Planning / set up / training
- Provide guidelines (hardware, logistics)
- Troubleshooting
- Hardware for distribution in HD
- Technical support and knowledge transfer
- Provider links i.e. HTR, videowall company etc

TVS staff are a mix of

- Technical Volunteers provide by organisers (1-2) and ICF(1-2)
- Professional companies
- National Team members (supporters)

Where to find support

There will be a ICF TVS coordinator available for your questions and help at each ICF event and also for you preparation if needed.

Please contact:

Hans-Peter Weiss

(ICF TVS coordinator)
