MILLAU - ICF WORLD CUP SPOT

MILLAU - INTERNATIONAL OUTDOOR SPORTS CAPITAL

- Millau, a little town in the south of France is THE place to be for outdoor sports enthusiasts. Indeed, you can also practice paragliding, slacklining, climbing, mountain biking and kayaking in this area.
- Millau and its canyons are mythic for climbers and paddlers : [Tarn Canyon](#), [Jonte Canyon](#) and [Dourbie canyon](#) are ridden all the year by outdoor sports lovers and tourists.
- The people of Millau have an outdoor philosophy and we can see that with all the events which are organized in Millau throughout the year : Natural Games, 100km de Millau, Templiers festival, French paragliding championship, European Canoe Freestyle Championship , Viaduc run, Petzl Roc Trip... and more.

MILLAU WHITEWATER STADIUM - A PERFECT SPOT WITH PERFECT VISIBILITY

Millau whitewater stadium has the latest technology : it is customizable and flexible. All kinds of public can be hosted (amateurs, non initiated, curious and experts). It disposes of EDF moving obstacle patents which allows the changing of river flow without the use of tools. Their different lengths, positions, shapes or numbers permit the organization to create any personalized obstacles. In this way, it is possible to change a playful river to a high-level river that can hold big competitions in just ten minutes.

For more information, please check appendix n°1.

Millau whitewater stadium has its benefits and holds a good reputation with respect to freestyle paddlers: it offers excellent training conditions throughout the year and an excellent tool for "work" for paddlers due to these controllable specifications. Many French and foreign paddlers come to train in Millau whitewater stadium throughout the year.

Millau whitewater stadium and MJC Millau Kayak Club (local canoe kayak club) have hosted no less than 4 national trials for French canoe freestyle team, many rounds of "Free kayak Tour" and a World Cup in 2014. Moreover, neighboring countries of France, like Spain, are even organizing their own cups of Spain in Millau. Again this year (2017), The Natural Games will host the a EuroCup.

This spot also can hold up to 7 000 spectators watching the competition !

And the festival has free access to the public !

WHITewater STADIUM SPECIFICATIONS (1)

« Reconcile the creation of a flood discharge arm and the practice of whitewater »

In the context of the restructuring of the upstream of Maladrerie, Millau city have decided to make a new water channel to facilitate the transit of flood's Tarn and create a whitewater stadium. At the heart of the area of sports and leisure "Maladrerie", this modular whitewater river allows varying navigational difficulties which do not prevent the discharge which prevent the discharge of overflow and ensure a spillway function. A fishway provides, regardless of the operating flow whitewater course, fish migration.

APPENDIX 1

WHITewater STADIUM SPECIFICATIONS (2)

- Valve-roof

It's a metallic structure whose function is to cut and control the flow in the white water stadium. It should also allow the passage of boats. The valve-roof consists of two parts. The component whose function is to create the necessary seal of water retention upstream and allow the control of the downstream flow's sinking more or less. The roof whose function is to support the sheet of water spilled on the flap into the downstream basin. The roof is equipped with baffles for generating attractive and safe water movements.

This mechanism has been studied in a reduced model laboratory. Thus, the valve-roof becomes part of the whitewater course. It is possible to install one or more emergency stop buttons that control the immediate return of the valve-roof to cut off the flow in the Whitewater River.

- Moving obstacle

Those polyethylene elements are arranged vertically in the bed of the river. This structure is held down through grating precast concrete. These are pierced by 32 holes evenly spaced to receive the obstacles in all respects. It rests on the base of the riverbed and is movable with a handling machine. The design of the grating allows the self-cleaning and prevents clogging phenomena. Moving obstacles are used to change the movement of water from the river except by flow variations and without the use of tools. Their different lengths, positions, shapes or numbers are used to create the shape of any obstacle. Their ease of movement allows one person to change the route of the river.

Thus, it is possible to change a fun river to a high level competition river in just a few (ten) minutes.
